SUMMARY

Cloud Engineer with hands-on AWS infrastructure operations for **10+ enterprise customers** across healthcare, automotive, and SaaS, now targeting **DevOps Engineer** and Kubernetes platform roles. Runs Linux and Windows system administration, monitoring and alerting, incident response, on-call support, and disaster recovery in production. Deploys containerized applications on **Kubernetes** with **Helm** and **Jenkins**, and runs observability on **Prometheus** and **Grafana**. Preparing for the **Certified Kubernetes Administrator (CKA)** exam. AWS Certified Solutions Architect - Associate and CCNA certified.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- Cisco Certified Network Associate (CCNA)

TECHNICAL SKILLS

Kubernetes & Containers: Kubernetes, kubectl, Helm charts and releases, Deployments, StatefulSets, Services, Ingress, namespaces, ConfigMaps, Secrets, RBAC, resource requests and limits, rolling updates and rollbacks, Jobs and CronJobs, Docker, container image builds and registry push, multi-environment deployments

CI/CD, Infrastructure as Code & Automation: Jenkins, GitHub Actions, GitLab CI, Git, YAML, CI/CD pipelines, build-test-deploy automation, Helm-based releases, OIDC, Terraform, Ansible, Python, Bash, PowerShell, SQL, JavaScript

Cloud & Infrastructure (AWS): EC2, VPC, IAM, S3, EBS, RDS, AWS Backup, ELB/ALB, Auto Scaling, Route 53, CloudFront, Lambda, ECS/Fargate, ECR, DynamoDB, SQS, SNS, WAF

Linux, Networking & Web Servers: Linux server administration, Ubuntu, Debian, Windows Server, SSH, systemd, filesystems, users and permissions, package management, DNS, TCP/IP, HTTP/HTTPS, SSL/TLS, VPN, security groups, NACLs, VPC peering, load balancing, Nginx, Apache

Monitoring, Logging & Observability: Prometheus, Grafana, CloudWatch, CloudTrail, ELK, OpenSearch, metrics, dashboards, alerting, health checks, availability monitoring, resource utilization

Security, Reliability & Operations: cloud security, container image security, IAM least privilege, MFA, GuardDuty, Security Hub, AWS Config, backups, disaster recovery, business continuity, high availability, incident response, on-call support, root cause analysis, technical documentation and runbooks

WORK EXPERIENCE

Cloud Engineer - Zarthi | Oct 2025 - Aug 2026 | Trivandrum, Kerala

- Supported AWS infrastructure for **10+ enterprise customers** across production and development, and independently resolved cloud, application, and connectivity incidents in rotational on-call shifts using logs, request tracing, and root cause analysis.
- Built **Python automation** to assess **448 EBS snapshots**, verify **197 snapshots** in the archive tier, and remove **42 unused volumes totaling 30+ TiB**; implemented an **S3 VPC gateway endpoint** that cut observed NAT Gateway data-processing charges by **more than 50%**, and delivered a root-cause analysis for an **Amazon EFS cost spike**.
- Executed a **disaster recovery drill for 10 EC2 workloads** with AWS Elastic Disaster Recovery and restored two RDS snapshots into a separate account; managed a **cutover for six SQL Server instances** that preserved private addressing and security configuration, and wrote the **technical documentation and operational runbooks** for decommissioned resources.
- Provisioned and troubleshot **Linux and Windows EC2 instances**: AMIs, EBS volumes and snapshots, users and permissions, SSH, systemd services, filesystems, and disk expansion; configured **VPC routing, security groups, NACLs, peering, site-to-site VPNs, and load balancers** for a migration behind an HTTPS ALB with ACM and WAF.
- Used **Prometheus and Grafana** for metrics, dashboards, and alerting across CPU, memory, disk, and network utilization to surface availability problems before customer impact; assessed **resource dependencies across development, UAT, and production** before approved deprovisioning.
- Managed **AWS accounts and IAM** with MFA and performed **security reviews** across EC2, VPC, S3, IAM, CloudTrail, AWS Config, GuardDuty, and Security Hub, collaborating with the development and platform teams to remediate findings.

PROJECTS

Kubernetes platform with Jenkins CI/CD and observability | Kubernetes, Helm, Jenkins, Docker, Prometheus, Grafana

- Deploys containerized applications across **development, staging, and production namespaces** using **Helm charts** for Deployments, StatefulSets, Services, and Ingress, with ConfigMaps, Secrets, and namespace-scoped RBAC.
- Runs a **Jenkins** pipeline that builds the **Docker image**, pushes it to ECR, performs the **Helm upgrade**, and keeps the previous release for **rollback** without a rebuild; adds **Prometheus** exporters and liveness and readiness **health probes**, plus **Grafana** dashboards and alerts for request rate, errors, latency, and saturation.

Microservices platform infrastructure | ECS on EC2, RDS, Redis, OpenSearch, SQS, ALB, Terraform

- Built a modular Terraform microservices platform: two-AZ VPC, ECS-on-EC2 compute, ALB path routing, private RDS/Redis/OpenSearch, and SQS workers with DLQs; a **GitHub Actions** OIDC pipeline builds and pushes container images to ECR, runs Terraform apply, and deploys an ECS Fargate service behind an ALB with health checks.

AWS security and cost platform | Lambda, DynamoDB, S3, SNS, Cognito, API Gateway, IAM, Terraform

- Built a serverless multi-account platform with 24+ read-only cost, inventory, and security-posture detectors, cross-account IAM role assumption, DynamoDB finding tracking, SNS digests, and a Cognito-authenticated dashboard.

Cloud-native portfolio | AWS, Terraform, Lambda, DynamoDB, CloudFront, GitHub Actions, OIDC

- Built a live serverless portfolio on a private S3 origin behind CloudFront with Route 53, ACM, a Python Lambda visitor counter, and DynamoDB, managed in Terraform and deployed through GitHub Actions using OIDC.

EDUCATION

Govt. Model Engineering College, Kochi, Kerala | B.Tech, Electronics and Communication Engineering | June 2025
